

# Saia PCD® Web Panel

## Industrial control panel with the Windows® CE operating system

The Windows®-based Saia PCD® Web Panels are specifically designed for the requirements of web visualisations and preconfigured with all the relevant applications and software tools. Cumbersome installation and software updates are eliminated to allow the immediate use of the Saia PCD® Web Panels. Windows® CE applications can also be installed and used on the control panels.

The Web Panels are also available in display sizes 12" and 15" with a resolution of 1280 × 800 pixels. The Saia PCD® Web Panel CE PCD7.D5150WTA010 product family is equipped with Intel® Atom processors. An innovative CPU concept provides sufficient processing performance for demanding applications using a clock speed of 1.1 GHz and the embedded operating system Windows® CE. The efficient CPU design results in minimal power loss, enabling the processor to operate without a fan.

The Windows® CE6.0 is stored on an external SD card. Fanless CPU operation with no moving parts guarantees a 100% silent operation. The Web Panels are ideal for applications that place heavy demands on processor performance and where silent operation is equally important.

Typical applications are in home/building automation and industrial applications in harsh environments.
